

2nd CSN Cyprus shipping debate

Debate Bridging the Energy Gap

Moderated by Capt. Eugen-Henning Adami
23rd January 2025

Carbon dioxide on the rise!

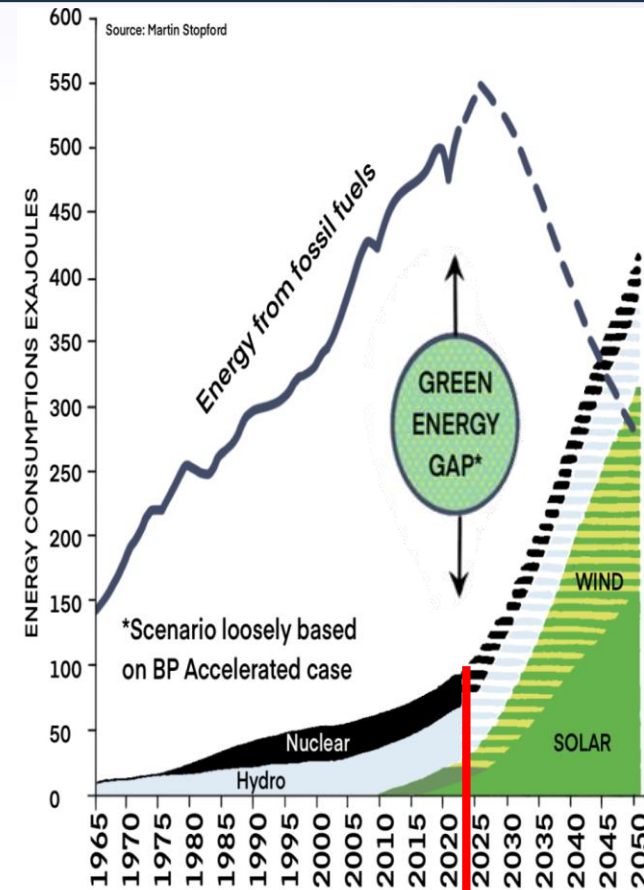

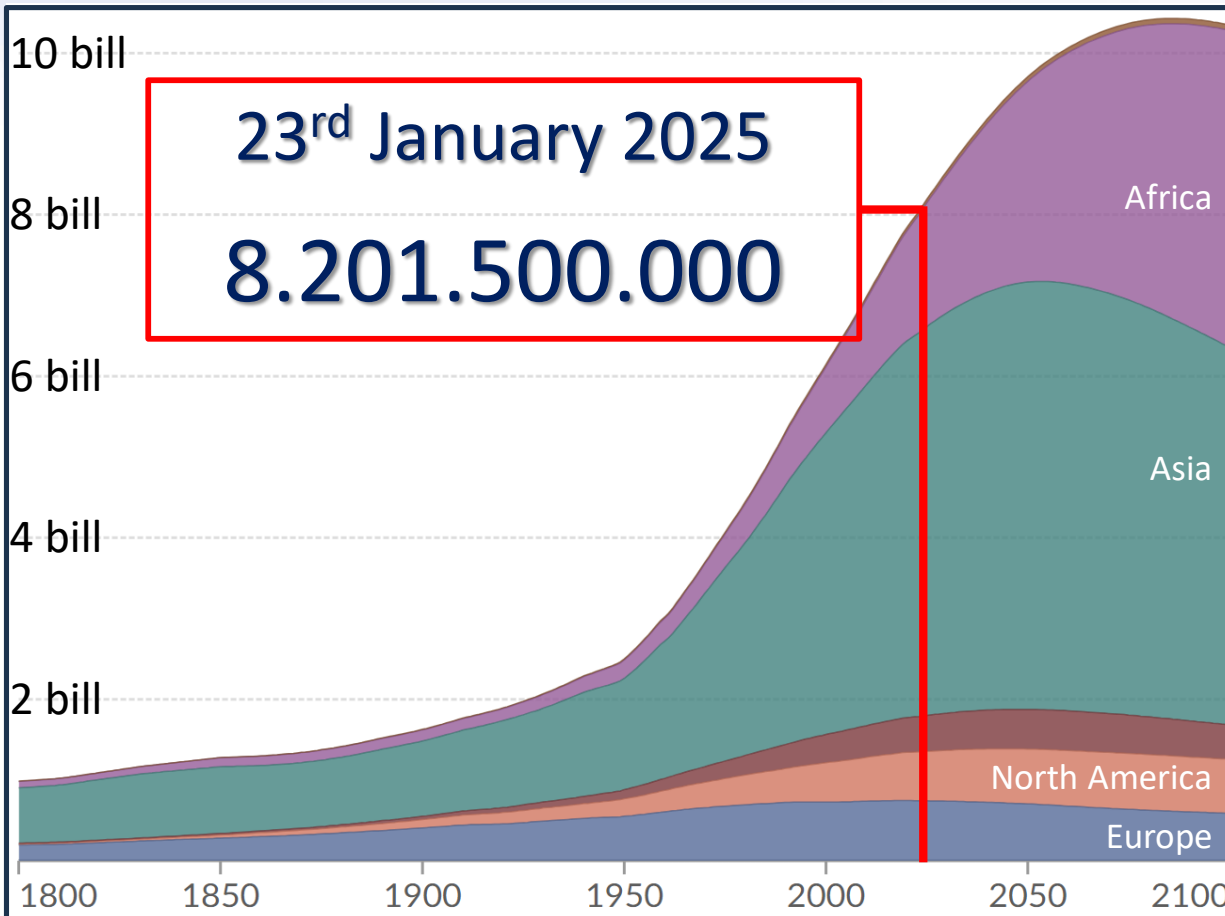

USA - First order of business

Facts and Predictions driving Climate Change

World Population & Green Energy Gap

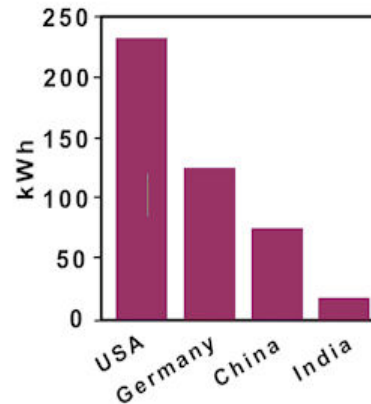

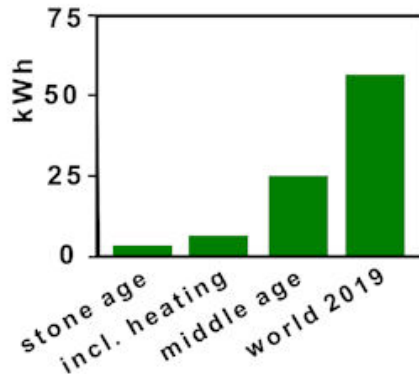

Facts and Predictions driving Climate Change

The daily world average energy consumption is 58 kWh per person.

- In India it's 19 kWh
- In the USA it's 219 kWh.

Imagine what will happen when India and China reach the daily energy demand of America.

Imagine our world population increases to 10 billion, as expected, and all countries advance to match the present consumption of USA. The world energy demand will increase nearly **sixfold**.

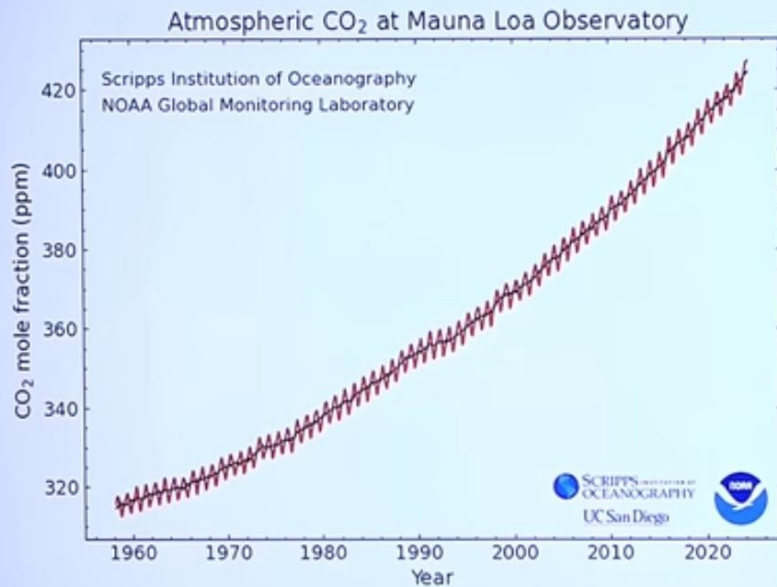

Carbon Dioxide Emission Facts!

The CO2 facts

The untold shipping facts

Corona Maßnahmen brachten nichts?
